Jimmy Young, Rachel Slagle,
Jinxin Liu

Vision Statement

“To connect the sphere of young scholars united in their purpose to achieve mastery in their college classes.”

Brief Description

For university students who have the desire to network with colleagues within mutual majors and courses, StudyIn is a college-based social network mobile app that facilitates communication between students that wish to make study groups and more. Unlike other social networks such as Facebook and Tinder, which lack the collegiate focus that university students need, our product will cater to a student's academic and social success.

User Requirements

On StudyIn, users should be able to...

- Log in with their college student information (IdentiKey for CU students)
- View their own classes or schedule
- View other student profiles
- Invite other students in mutual courses and majors into groups
- Join other students in groups for specific courses and majors
- Become friends with other students
- Join chatrooms and create study sessions with friends/groups
- Etc...

Project Plan

3 Phases:

Phase 1: Server Back End

Phase 2: Website

If time permits:

Phase 3: Application for Android and iPhone

Chosen Technologies

Presentation: Use CU color scheme, Black and Gold

Project Management Tool: Trello, Slack (main communication)

Languages: **Site:** HTML, CSS, PHP; **App:** Java

Back-End: Shared Rest Server: MySQL, Rest Server in PhP, JSON

Platform: **Site:** Phone + computer Browsers

App: CodeName1, Crossplay form Android + iPhone

Progress So Far...

Screenshot of login screen:

The easiest way to start a study group.
Provided at least a couple people are using this service, anyway...

Log in with your CU Identikey for your information to be filled out automatically.
No grades or personal information will be used or stored, only class info.
