# StudyIn Milestone #3

Project Database:

The department, courses, and groups descriptive entities lay out the necessary information relating to each of their respective subjects: departments are listed by name, to which several courses (identified by id) belong, and groups created by users are associated with these individual courses. Each entry in the course_wall entity, then, will belong to a single group, composed of and linked to several accounts entries through the group_enrol entity, with information tailored to the specific group assigned to the queried course wall. Messages sent by members of the group will be stored in a separate entity.
